PRO STEER

Valve group
& Receiver

Battery

Transmitter

Controller

Pro Steer is the optional valve and radio control add-on for running the whole tree shear movements precisely and separately.

It's particularly helpful for horizontal branch cutting and tree felling near a road or a powerline, as the operator can direct and interrupt every move: **grapple, knife, tilt, & accumulation grapple.**

In small energy wood accumulation, it eases the successive cuts and prevents the tilt sequence to start inadvertently.

For big tree cutting close to the diameter limit, interrupting all other functions is great for optimizing the hydraulic power to the knife.

The tree shear works in the normal sequence Grapple ▷ Knife ▷ Tilt, and every function can be activated and deactivated at any time.

No extra hydraulics, no extra cabling.

PRO STEER

Weight	20 kg (45 lbs)
Radio frequency	2.3 GHz
Radio functions	up to 4
Included supplies	Valve group Radio receiver (on grapple) Radio transmitter (in cabin) Controller with 4 buttons
Radio receiver power source	Makita 18 V li-ion, max 6.0 Ah <i>Batteries not included.</i>
Radio transmitter power source	Cabin power supply 9-32 V
Suitable to Biojack tree shears	Bj180, Bj230, Bj300 tilt
Base machine	Tractor, trailer, forwarder cranes
